

ANDREW TIPPIE

AI Systems Architect · Filmmaker · Writer & Editor

theandrewtippie@gmail.com · 703.581.8184 · Los Angeles, CA · responds within 30 min

PROFESSIONAL SUMMARY

I build AI systems and I make films. The two things are less different than they sound — both require architecture, story, and judgment about what should and shouldn't be automated. Current work: Dale, a production AI phone platform with paying clients in the trades vertical; Leon/CBL, a safety-first browser agent with a 900-line spec and 14 unoverridable safety invariants; and several research projects at the edge of AI safety and cognition. That work sits on top of a decade in scriptwriting, editing, and SAG performance. Looking for senior applied-AI or creative-AI roles where the technical-creative combination is an asset, not a footnote.

SELECTED SYSTEMS & PROJECTS

Leon (CBL) — Cognitive Browser Layer

v1 complete; v2 in design

Chrome extension implementing a safety-first browser agent.

- Two-agent architecture: model-agnostic planner (currently Claude API) + local deterministic executor, with a probabilistic Bayesian verifier and state-transition DAG world model.
- Three-tier scope engine (Personal / Organizational / Research) with cryptographic authorization proof; 14 unoverridable safety invariants including credential write-only, prompt-injection halt, and AXTree/visual divergence detection.
- Hash-chained forensic-grade audit log, control-rod damping inspired by nuclear engineering, and memory consolidation cycles inspired by sleep research.
- ~900-line specification developed through multi-stage simulated review across Chromium engineers, ML researchers, accessibility experts, security red teams, neuroscientists, and theoretical physicists. v1 shipped across 17 build phases; v2 scoping in progress.

Mozart — Six-Primitive Cognitive Substrate

Built; in pre-deployment testing

Modular substrate for composable AI cognition.

- Six primitives implemented, including CLONALG immune-system search with idiotypic-network suppression (anomaly detection), reservoir computing (temporal pattern dynamics), and hyperbolic memory (hierarchical representation with negative curvature).
- Benchmark suite and external evaluation in active development; documents negative results alongside wins as a deliberate research-discipline practice.
- Designed for selective composition into other systems rather than wholesale adoption.

42 — Instrumented Cognitive Observation Study

Phase Zero built; in active debugging

N=1 study of emergent cognition under binding pre-registration protocol.

- Sealed constitutional core, pre-registered hypotheses, welfare protocol with hard-threshold triggers, NYU Declaration as rubric.
- Hash-chained audit; 14 of 15 safety invariants verified end-to-end; resolving session-initialization issue before opening external observation.

Dale — AI Phone Platform for Trades

v2 rebuild in progress

Done-for-you AI receptionist for HVAC, plumbing, auto body, and custom fab shops.

- v1 served paying clients across the trades vertical: GoHighLevel + Retell + Claude API + Twilio + Make.com with vertical-specific configurations per trade.
- v2 rebuilds the stack for direct ownership (Supabase, Oracle Cloud Ampere, direct Retell + Twilio integration) and improved margin structure; onboarding orchestrated via CBL.
- A2P campaign approval pending; first clients begin onboarding post-approval.

Swarm v0 — AI Job & Opportunity Discovery Pipeline

In build

Budget-aware multi-agent intelligence system for daily AI/ML discovery and weekly opportunity synthesis.

- Five-stage pipeline: RSS/job-board collectors → local triage (dedup, keyword, novelty scoring) → batched LLM triage (Claude Haiku, ~\$0.10–0.30/day) → deep per-item analysis (Claude Sonnet) → weekly markdown report with ranked opportunities and positioning angles.

- Hard daily/weekly API spend caps enforced in code (\$1.50/day, \$25/month); idempotent and resumable; SQLite single source of truth.

Agent Architect

Production

Diagnostic tool that designs custom agent stacks for small businesses.

- React + Claude API. Takes a company name, returns a structured operations diagnostic (core problems, revenue leaks, urgency) plus a six-agent automation stack tailored to that company's gaps.
- Structured JSON output designed for handoff into the Dale onboarding pipeline.

Iterative Multi-Disciplinary Design Methodology

Reference document

Reusable ten-stage process for taking an idea to a build-ready specification.

- Codifies the process that produced the CBL specification: problem framing, baseline architecture, multi-team review, adversarial review, tier architecture, visionary review, cross-domain expansion, iterative convergence, and build-ready translation.
- Generalizes to any system requiring rigorous multi-perspective review under safety constraints.

PROFESSIONAL EXPERIENCE

Me Rigani Productions — Founder & AI Systems Architect

2022 – Present

Production company and AI development practice. Current focus: production AI systems for small businesses and AI integration in creative industries.

- Designed, specified, and shipped Leon (CBL) across 17 build phases; architecture now serves as a reference implementation for safety-first browser agents.
- Built and operated Dale v1 with paying clients across the trades vertical; managing v2 rebuild for direct stack ownership and improved margin structure.
- Produced the Iterative Multi-Disciplinary Design Methodology — a reusable framework for AI system architecture applied internally and to client engagements.
- Wrote and directed an award-winning short film screened at the Los Angeles Greek Film Festival; produced and directed a live TV/theatre hybrid project.

Writer, Editor & Script Consultant

2016 – Present

Develop and refine fiction and nonfiction scripts, treatments, and narrative content for film, television, and digital media. Collaborate with directors, producers, and creative teams to ensure written materials meet creative vision and audience expectations.

- Contracted for adaptation of award-winning projects into TV/film, requiring meticulous continuity and style editing across existing IP.
- Consistently delivers polished, production-ready written material under extreme deadline pressure.
- Proficient in Final Draft, Adobe Premiere Pro, and DaVinci Resolve.

SAG Actor

2017 – Present

Work across network television, film, and commercial productions. On-set experience with major directors and creative teams on high-profile network productions.

- Close script analysis and deep comprehension of language, subtext, and character voice.
- Sensitivity to voice and tone that crosses over directly into AI-voice design and model behavior work.

Buyer

2016 – 2024

Managed high-stakes purchasing decisions through rigorous multi-criteria evaluation. Product revamp initiative drove a 63% increase in sales through careful research, branding judgment, and follow-through.

SKILLS & TOOLS

AI Systems & Engineering Agent architecture (planner/executor, multi-agent orchestration) · Prompt engineering and structured-output design · Safety invariants, scope engines, constitutional layers · Hash-chained audit and forensic-grade traceability · Probabilistic verification under noise · RAG pipelines and vector database integration · Eval framework design · MCP server integration · AI welfare research protocols.

Languages, Frameworks & Platforms JavaScript / TypeScript / React · Python · Claude API (tool use, agent workflows, MCP) · Chrome Extension MV3 · Supabase · Oracle Cloud Ampere · ChromaDB · GoHighLevel · Retell · Twilio · ElevenLabs API · Make.com · Vercel · Groq · Ollama.

Editorial & Creative Copyediting and proofreading · Style adherence and style guide creation · Scriptwriting and story development · Narrative continuity across existing IP · Final Draft · Adobe Premiere Pro · DaVinci Resolve.

Professional Strengths Translating between technical and creative stakeholders · Multi-disciplinary review and synthesis · Deadline-driven independent remote work · Documentation and specification authorship · Multi-project management · Pop culture fluency.

EDUCATION

Bachelor of Science, Biopsychology
